Learning objectives:
Become familiar with common techniques for combustible dust explosion venting, isolation and suppression in order to prevent or mitigate equipment and building explosions.

Target audience:
This webinar is for anyone who deals with processes that generate, handle or collect combustible dust. This includes environmental health and safety managers, operations managers, facility engineers, maintenance engineers, production operators and anyone working in an environment where combustible dust is generated or handled.

Description:
Many production operations involve the handling of combustible dust. In this webinar we will address the basic use and application of explosion venting, isolation and suppression in order to prevent or mitigate property damage and business interruption.
